

Company Profile

Mission

Living Walls is made up of a team of Landscape Architects, Horticulturalists, Gardeners, Engineers, and Installers and together we design, install, plant and maintain Roof Gardens (also known as Green or Living Roofs) and Vertical Gardens (also known as Green or Living Walls).

History

Living Walls was founded by Frank Muscat, a RIBA Chartered Architect, Warranted Civil Engineer, accomplished Project Manager, and experienced Landscape Architect.

Frank is also the Founder and CEO of Doric Studio an Architectural and Civil Engineering practice with over thirty years' experience in the sector.

Active in both public and private sectors, Doric Studio has been involved in the design of urban spaces, public buildings, marine works including piers, slipways and breakwaters, educational facilities such as new schools for special needs, healthcare facilities including retirement homes and health centers, restoration works, industrial buildings, bakeries, nurseries, commercial projects including retail and offices and residential projects. In 2020 Living Walls was set up as an Environmental Landscaping firm specialized in the design and installation of Vertical Gardens and Green Roofs.

Services

Design

A successful Green Roof or Green Wall project requires thorough planning. This stage usually commences with a topographic survey and includes a photographic survey. Next comes the preliminary design, plant selection and estimate. The proposal is then presented to the client and the process may be repeated until the client accepts and signs off the project proposal.

Installation

Once the Project is approved, Installation drawings are prepared, and materials procured. In the case of a green roof this normally consist of water proofing, root barrier, drainage layer, filter sheet, substrate, and irrigation. Green walls consist of waterproofing, structure, modules, and irrigation.

Services

Planting

With the installation complete and the irrigation system tested the next stage is the procurement and planting of the various species.

Maintenance

All landscaping projects require regular maintenance particularly if they are located in a hot and arid country like Malta. A maintenance schedule will be prepared for each project taking into consideration the type of plants, environmental conditions, exposure to the elements and similar factors.

Experience

Living Walls has already delivered highly praised and noteworthy projects such as:

- The Green Wall at Marsa Hamrun Bypass in Santa Venera;
- An Intensive Roof Garden and Green Wall at Valletta Design Cluster;
- The Green Wall at Mosta Technopark;
- The Green Wall at Kordin Industrial Estate;
